Coding & Solution

Date	14 July2026
Team ID	xxxxxx
Project Name	Smart Lender – AI Based Loan Approval System
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/swarnarajugovindalapudi/Smart-Lender-Loan-Approval-Prediction
Programming Language(s)	[e.g., Python, JavaScript, Java]
Framework(s) Used	[e.g., Flask, React, Spring Boot]
Key Features Implemented	• User registration and secure login. • Loan application form with customer details. • Loan eligibility prediction using a Machine Learning model. • Data preprocessing and feature scaling.
Pending / Incomplete Features	• Integration with banking APIs for real-time verification. • Email and SMS notifications for loan status updates.
Setup / Run Instructions	• Register or log in. • Fill in the loan application form. • Submit the application.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The Smart Lender application uses a machine learning model to predict loan eligibility based on applicant information. The project is developed using Python and Flask with a user-friendly web interface. The source code is maintained in a GitHub repository and follows clean coding practices.
